

CS 4501/6501: In-class 4

TDD

14-Sep-2017

Names:

Purpose: Understanding TDD

Instruction: Work with your neighbors in groups.

This in-class exercise is less formal than usual. We will not use paper copies and **no submission** is required. We'll stop periodically during the slides, and do exercise one step at a time with discussion between steps.

You are encouraged to work through the TDD in process in your favorite IDE. If you run into anything you are not sure about, post to Piazza. There are two goals here. First, learning TDD is best accomplished by doing TDD. Second, assignment 3 is exactly the same process as, except applied to a different problem.
