

CS 4501/6501: Software Testing

Quiz 6 Guide — **Fall 2017**

Syllabus	Schedule	Resources
--------------------------	--------------------------	---------------------------

Quiz 6 will focus on input space partition testing (lectures 09/21 - 10/05). In particular, you should be able to analyze partitions for problems with respect to completeness and disjointness.

You should be able to apply coverage criteria to a given input domain model, identify infeasible tests, and repair (or not) these tests as appropriate.

Assignments 4-5 and in-class exercises 6-7 will form the basis for the quiz.
